Riverside Nursery

M. J. GRAHAM
PROPRIETOR

ADEL, .. IOWA.

[COPY]

STATE OF IOWA
Certificate of Nursery Inspection.

This is to Certify, That the Growing Nursery Stock and Premises of the Riverside Nursery, M. J. Graham, proprietor, situated in Adel, County of Dallas, State of Iowa, has been inspected according to the provisions of Chapter 53 of the Acts of the Twenty-seventh General Assembly, and that no indications have been found of the presence of the San Jose scale or other dangerous insect or plant disease. This certificate is invalid after June 1, 1903. Certificate No. 97. H. E. SUMMERS,
Dated 17 Sept. 1902, Ames, Ia. State Entomologist.

ANNOUNCEMENT.

We Desire to Return Thanks to all customers, old and new, for increasing patronage as the years go by, and hope, with increased facilities, and a full assortment of the best varieties, to merit a continuance of your valued orders.

Our Aim is to grow first-class, reliable stock only, and to supply it to the planter direct, at the lowest possible price consistent with good stock and service.

Cheap Stock is dear at any price, and often brings great disappointment to the purchaser, by reason of being untrue to name, or not adapted to our climate.

Budded Trees. Agents of eastern nurseries often claim great advantages for their stock, for the reason that it is propagated by budding, and insinuate that our home grown trees are short lived because they are grown from root grafts. The facts are, we grow thousands of budded trees each year, and there is no difference whatever in the comparative hardiness of budded and grafted trees. The agents aforesaid are much more liable to be afflicted with "black heart" than are our grafted apple trees.

Pedigreed Stock. Much has been said and written in recent years about the advantages of trees and plants grown from buds or cuttings selected from the highest type of the variety to be propagated. We are working along this line, and wish to offer as evidence the fact that apples were found on a number of our three-year-old trees in nursery last fall.

Guarantee. We exercise the greatest care to have all varieties true to name, and are ready, upon the proper proof, to replace any stock that may prove untrue, or refund the amount paid for the same, together with 6 per cent interest; but it is mutually agreed between the purchaser and ourselves that we are not further liable.

Location. **Adel** is situated on the Chicago, Milwaukee & St. Paul Railway, 22 miles west of Des Moines. Our shipping facilities are unsurpassed, and all goods billed out at special low rates.

Prices are for quantities specified, but six will be furnished at dozen, 50 at 100, and 500 at 1,000 rates respectively.

Orders from unknown correspondents should be accompanied by money order or bank draft to cover amount.

Packing will be done in the most thorough manner without extra charge.

No Scale or other dangerous insect or plant disease has ever been found upon our premises See certificate on first page of cover.

AWARDS

Diploma World's Fair, Chicago, 1893.

Diploma and Medal Trans-Mississippi Exposition, Omaha, 1898.

First premium on large collection of Pears, Iowa State Fair 1900 and 1902. First premium on Hunt plum for QUALITY Iowa State Fair 1901.

APPLES

Plant on good, well drained soil. Set a little deeper than the trees stood in the nursery and lean toward the one o'clock sun. Give thorough cultivation, mulch during drouth, and after the trees come into bearing, apply well decomposed manure annually to the surface of the soil. For profit, plant largely of the winter varieties.

Standard Varieties

	EACH	DOZ.	100
Two years, light, 3 to 4 feet	\$.18	\$2.00	\$15.00
Two years, medium, 4 to 5 feet.....	.20	2.25	18.00
Two years, extra, 5 to 6 feet.....	.25	2.50	20.00
Three years, extra, 6 to 8 feet30	3.50	25.00

Select List; Named in Order of Ripening

Summer—Yellow Transparent, Red Astrachan, Red June, Sweet Bough, Sweet June, Duchess, Cole's Quince, Ey Pennock, Chenango Strawberry, Benoni, American Summer Pearmain.

Fall—Maiden's Blush, Wealthy, Fall Orange, Ramsdell's Sweet, Bailey's Sweet, Wolf River, Haas, Snow, Rambo.

Winter—Fulton, Northern Spy, Yellow Bellflower, Grimes' Golden, Roman Stem, Wagner, Nonesuch, Jonathan, Rome Beauty, Paradise Winter Sweet, Price's Sweet, Scott's Winter, N. W. Greening, Black Annette, Sheriff, Mo. Pippin, Winesap, Rall's Genet, Gano, Ben Davis, York Imperial, M. Blk. Twig, Milam and others.

New and Rare Varieties

Two years, medium, 4 to 5 feet.....	\$.25	\$2.50	\$20.00
Two years, select, 5 to 6 feet.....	.30	3.00	25.00
Three years, select, 6 to 8 feet35	4.00	30.00

Colton—Extra early, large, yellow, fine, bears early, productive, desirable.

Jeffris—Medium size, yellow and red, high quality, best early autumn apple. The Jeffris has been grown in this county for 35 years, has withstood the most severe winters without injury, and is superior to the Dyer in quality. No orchard is complete without this rare and valuable variety.

Western Beauty—Large, red, excellent. One of the finest fall apples.

Patten's Greening—A seedling of the Oldenburg, and valuable in the north and northwest, where a tree of the greatest hardiness is a necessity. Fruit large, uniform in size and equally good for eating and cooking. Autumn in central Iowa, midwinter in the north.

North Star—Originated in Maine. Tree hardy and very productive. Fruit large, red, and very best quality. Season October to January.

Banana—Large, yellow, with red blush; flesh fine grained, with distinct banana flavor. Tree perfectly hardy, early and abundant bearer. Fruited here three years. A valuable apple. Season November to May.

Greenville—A seedling of Maiden's Blush, exactly like it in size and quality, but ripens in mid-winter. Tree vigorous, hardy and productive.

Winter Queen—A new variety from Canada, highly recommended as an apple of excellent quality and a late keeper; fruit large, red; tree vigorous, upright in growth.

Seeviers—Medium to large; greenish yellow, with blush. Best in quality. Tree hardy and productive; valued highly where known. December to McL.

Babbitt—Also called "Western Baldwin." Tree vigorous, hardy and prolific; fruit large, bright red, rich acid; ripens after Winesap.

American Blush—Medium to large, oblate, beautiful crimson on yellow skin, superlative quality, hardy and productive. Season, Dec. to March.

Stayman's Winesap—A seedling of Winesap, but larger and better in

every way; tree a strong grower, early and regular bearer. Fruit a dark rich red, extra quality, should be in every orchard.

Akin—Size and color much like Jonathan, but keeps three months longer, quality even better than that excellent apple. Tree of strong upright growth, and has proven entirely hardy as far north as Minnesota.

Ingram—A seedling of Rall's Genet (Geneton) but larger, much darker red, and better in quality; a very late keeper; tree vigorous and hardy; we have a fine stock of trees of the Ingram, and recommend it with confidence.

Chisman—A valuable Iowa apple of the Bellflower type; hardy, bears early and abundantly, yellow, excellent, long keeper.

SPECIAL NEW VARIETIES

Arctic—Originated on the St. Lawrence river opposite Wolf Island, Canada, where the original tree has withstood 45 degrees below zero, uninjured. "The fruit surpasses in size, beauty and quality any late keeping winter apple yet introduced, being very large, of a deep, dark, rich red color, of firm texture, brisk sub acid flavor, making it an attractive and delicious dessert apple of the highest excellence. The tree is a very rapid, vigorous grower, and an early, annual, and great bearer." The Arctic fruited in the orchard of G. A. Ivins, of Hardin county, Iowa, the past season, and is highly recommended by him. 5 to 6 feet, first-class, 50c each, \$5 per dozen,

Opalescent—Fruit large to very large, a beautiful shining red, flesh tender, mild sub-acid; season December to April; highly commended by leading fruit growers. 5 to 6 feet, first-class, 50 cents each, \$5 per dozen.

Stuart's Golden—Tree vigorous, hardy, and prolific, fruit bright yellow with red blush, flesh tender, juicy, rich and of excellent quality; said to equal or even surpass Grimes' Golden in this respect; season December to April. 5 to 6 feet, first-class, 50c each, \$5 per dozen.

Wismere's Dessert—Originated in Northern Ontario, Canada; tree vigorous and entirely hardy, fruit medium to large, beautifully colored with bright red over yellow. In quality Wismere's Dessert excels any apple ever originated, sub-acid, mild, delicious, being entirely distinct from the flavor of any other apple, resembling that of a luscious ripe pear in its melting juiciness; season December to April. 5 to 6 feet, first-class, 50c ea., \$5 doz.

Bassett (Frank Bassett)—Said to possess all the valuable qualities of the Ben Davis, with the addition of high, rich quality, and brilliant red color, the tree is of strong, vigorous growth and a heavy **annual** bearer; comes into bearing early. With ordinary care the fruit will keep until July. 5 to 6 feet, first-class, 50c each, \$5 per dozen; medium, 2 year trees, 40c ea., \$4 doz.

Missing Link—Large, excellent, bears early, keeps a year. See special circular for description, testimonials and prices.

Crab Apples— $3\frac{1}{2}$ to 4 feet 20c, $4\frac{1}{2}$ to 6 feet 25c each. Martha, Hyslop, Whitney No. 20, White Arctic.

Florence (new)—Finest crab apple grown, fruit large, crimson, tree vigorous and free from blight; medium 25c, first-class 35c each.

PEARS

The Pear succeeds best on high, well drained soil, with yellow clay subsoil. Plant deep enough to cover point where budded, about four inches, give good cultivation, fertilize with wood ashes, and annually, about July 1st, wash the stems and main branches with whitewash, to which a little sulphur has been added. Where trees make a strong growth, say three or four feet annually, the shoots should be cut back about one-half their length each spring before new growth begins. This will cause the trees to grow stocky and force them into early bearing, after which seed ground to clover.

The Pear is not subject to attacks of the borer, and with the exception of blight is less liable to disease than the apple.

Should blight appear, cut out the affected branches and **burn at once**. Keep all blighting crab and apple trees from the Pear orchard.

We fruit from thirty to forty varieties of Pears each year, and have been awarded many premiums at the Iowa State Fair for excellence of fruit.

Standard Trees (on Pear Roots) in Order of Ripening.

4 to 5 feet, medium, 30c each, \$3 per dozen; 5 to 6 feet, heavy, 40c each, \$4 per dozen; extra size trees, 7 to 8 feet high, bearing age, 50c ea., \$5 doz.

Koonce—Vigorous, fruit medium to large, good quality, early in July.

Tyson—Medium, excellent quality, August.

Warner—A beautiful grower, of "ironclad" hardiness and entirely immune from blight, fruit medium, round, juicy, good, last of August.

Longworth—Vigorous, hardy, free from blight, juicy, sweet; early Sept.

Bartlett—Large, buttery, juicy, high flavor; sometimes blights, but should be in every orchard; early Sept.

Seckel—Small but of highest quality, free from blight; Sept.

Vermont Beauty—Medium size, beautiful, excellent quality, tree hardy and very productive; October 1st.

Sheldon—Large, round, superb quality; last of Sept.

Rutter—Large, nearly round, yellow and russet, flesh melting, sprightly, very good, bears early and abundantly; October.

Kieffer—Very large, yellow with crimson cheek, tree hardy, vigorous, and an early, annual bearer; fruit should be gathered early in October and ripened in a cool, dark room or cellar, when it is unsurpassed for canning.

Mongolian Snow—Same description as Kieffer, but our stock is kept separate for those who may prefer it.

Mt. Vernon—Tree hardy, very productive, fruit good size, melting, with spicy, vinous flavor; midwinter.

Bordeaux—Large, round, long keeper, melting, juicy and rich; season December to March.

NEW VARIETIES

4 to 5 feet 40c each, \$4 dozen; 5 to 6 feet 50c each, \$5 dozen.

Almo—Tree vigorous, free from blight, bears young, fruit large, yellow, melting, excellent

Lexington—Resembles Bartlett, but three weeks earlier; tree of dwarf habit and comes into bearing early.

Ozark—Vigorous, free from blight, fruit very large, oblate, yellow, flesh white, juicy, slightly sweet.

Bar-Seckel—A cross between Bartlett and Seckel combining the many excellent qualities of these fine old varieties; fruit large as Bartlett, green, with red cheek, flesh melting, vinous, excellent; fruited heavily here the past season.

Rossney—Originated in Utah, tree vigorous, fruit large, pyriform, and of excellent quality; September.

Seneca—Vigorous, free from blight, resembles Bartlett in tree and fruit but ripens a month later.

Worden Seckel—A seedling of the old Seckel, equal in quality, double size; should be in every collection, season Sept. and October; keeps well.

DWARF PEARS

The trees are grown by budding the Pear upon Quince roots. The result of this union dwarfs the tree but not the fruit, which is often finer upon the dwarf than upon standard trees of the same variety. This is notably the case with the Angouleme. Plant the trees deep enough that the point of union will be from 5 to 6 inches below the surface. This is important. Dwarfs may be planted 8 or 10 feet apart, are especially desirable for small lots or gardens, and usually begin to bear the next year after planting. Prices: First-class trees, 4 to 5 feet, well branched, 40c each, \$4 dozen; 3 to 4 feet, 30c each, \$3 dozen.

Alamo—For description see standard pears.

Boussock—Vigorous, productive, fruit large, excellent; September.

Beurre Hardy—Vigorous, productive, fruit large, melting, vinous: Sept.

Angouleme (Duchess)—One of the largest of our really fine pears; succeeds best on the quince, and is planted more than all other dwarfs combined. October and November.

Anjou—Large, buttery, melting, one of the finest pears grown. Keeps until the holidays.

Dorset—Large, pyriform, yellow, with red cheek. Flesh juicy, melting, sweet: season Midwinter to May.

Also **Bartlett, Louise Bonne, Lawrence and Warner.**

PEACHES

The abundant crops of Peaches produced in this county and throughout the south half of Iowa during recent years, bear witness to the fact that the "peach belt" is being extended northward. The following list comprises the hardiest varieties of known value, ripening in the order named.

Plant on south or east slope or in sheltered situation, and train with low heads. 3 to 4 feet 20c each, \$2 per dozen; 4 to 5 feet 30c each, \$3 per dozen.

Early Canada—Originated in the province of Ontario; Canada. Very hardy, fruit large, melting, excellent; last of July.

Alexander—Medium to large, skin quite red when fully ripe; has fruited in this county for years; productive, juicy, and very good; season Aug. 1.

Champion, Jr.—A seedling from the Champion, exactly like it, but ripens three weeks earlier, thus supplying the want of a good peach early in August.

Champion—Tree hardy and productive; fruit large and of very best quality; season about August 15th to 25th.

Bokara No. 3—Originated in Ames, Iowa, from seed imported from Asia; tree very hardy, fruit large, freestone, excellent; season last of Aug. Much disappointment has been caused in the past as the result of mixed stock being sent out as No. 3. Our stock is genuine and can be planted with confidence.

Fitzgerald—Originated in Canada, north of the peach belt; very large, yellow, freestone, best quality; season early September.

Elberta—Very hardy in tree and fruit bud; fruit large, yellow, freestone, excellent quality; September 10th to 15th

Mitchell—Has been grown in this county more than forty years and has a record of seven crops out of ten years; fruit medium size, white flesh, freestone, and of good quality; last of September.

Hill's Chilli—Medium size, yellow, shaded with dark red; flesh yellow, very rich and sweet, freestone; October 1st. One of our most hardy and valuable peaches.

NEW VARIETIES—EXTRA

3 to 4 feet 40c each, \$4 per dozen; 4 to 5 feet 50c each, \$5 per dozen.

Holderbaum—Tree hardy as an oak, fruit immense in size, color cream yellow, with red cheek; pit small, freestone, quality unsurpassed; season August 10th to 15th.

Russell—Originated in Nebraska; the result of twenty five years experiment to produce a peach adapted to the severe and changeable climate of the west; medium size, white, shaded with deep red in the sun; flesh white, melting; excellent, freestone; ripens last week in August.

Klondike—Tree strong, upright in growth, fruit very large and of superb quality; season about October 1st.

S. B. Hedges, Ex U. S. Pomologist, says: "Klondike to my knowledge is the most beautiful late white peach in existence."

Tama—Originated in Tama county, Iowa, where the original tree stood the severe freeze of 1899 unprotected; fruit medium size, creamy white, with slight blush in the sun; flesh white, juicy and rich, pit small, freestone; beyond doubt this is one of the most hardy peaches yet introduced and should be included in every collection. Ripens last of September.

PLUMS

The following list includes the very best varieties of the several species, and are named (in each group) in order of ripening. Plant about one rod apart, intermingling the varieties to insure fertilization of the blossoms. Manure the ground heavily and give clean cultivation.

Price, 4 to 5 feet 40c each, \$4 dozen; 5 to 6 feet, 50c each, \$5 per dozen.

AMERICAN VARIETIES

Milton—Resembles Wild Goose and ripens just before it; valuable for early market.

Wild Goose—Large, bright red, well known; ripens last half of July.

Pool's Pride—Surpasses Wild Goose and all others of the Chicasaw class. Fruit large, bright red, of excellent quality, tree hardy and a regular bearer of enormous crops.

Charles Downing—Large, round, bright red, will probably supersede the Wild Goose as it is more hardy in tree and superior in fruit.

American Eagle—Very large, dark red, productive; one of the finest Americans.

Hammer—Large, round, light red, excellent quality, nearly freestone; one of the best for either home or market.

Wyant—A native of Iowa, very large, fine quality and a perfect freestone; last of August.

Stoddard—Very large, round, yellow, overspread with red; last of Aug.

Miner—Large, deep red, very productive; standard late variety.

JAPANESE VARIETIES

Red June—Large, bright red, extra early, one of the most hardy and valuable of the Tri-Flora group.

Abundance (Botan)—Large, oblong, light red, mid-season; productive.

Burbank—Large, round, rich cherry red, flesh yellow, sweet; productive.

Wickson—Very large, heart shaped, dark red and of finest quality; ripens late, tree vigorous, upright and often bears at one year from the bud.

EUROPEAN VARIETIES

Green Gage—Medium size, excellent quality; last of August,

Lombard—Medium to large, violet red, excellent quality; tree hardy and very productive.

Tatge—Closely resembles Lombard, yet said to be distinct and more hardy in tree.

Yellow Egg—Very large, oblong, excellent for preserving; ripens late.

SPECIAL NEW VARIETIES

Price, 4 to 5 feet 50c each, \$5 dozen

America—One of Burbank's new hybrids; large, round, color bright golden yellow, with pink blush; flesh yellow, good, bears early.

Climax—Fruit very large, heart shaped, color deep red, flesh yellow and firm, flavor sweet, rich, quality fine; ripens early. Regarded by Luther Burbank as being one of his most valuable productions.

Hunt (Hunt's Hybrid)—New, originated with Henry Hunt of this county from seed of Wild Goose Plum, believed to have been pollinated by Americana; fruit large to very large, bright red, overspread with delicate bloom. Flesh yellow, firm, sweet and rich; when cooked the skin separates from the flesh and the sauce is entirely free from the acridity so objectionable in pure native plums. Tree hardy and productive and does not split down like the Wild Goose.

This is not an untried novelty, but has been tested ten years, as the originator would not send it out until he knew it was worthy. Ripens August 1st to 15th.

Prof. Budd says of the Hunt plum: "It is by far the finest plum of the Chicasaw species we have ever seen, and the best in quality."

At the Iowa State Fair, 1901, the Hunt plum was awarded the first premium for quality in competition with "Gold" and other fine plums.

Deaton—Of Green Gage type. Large, pale green, with a fine bloom, unsurpassed in quality, freestone; ripens last of August.

CHERRIES

Cherries, like pears, succeed best when planted on high, well-drained soil. Plant deep enough to cover point where budded about four inches. Train with low heads. Have tested thirty varieties of cherries. Here is the cream of the list.

Prices except where noted:

One year, 3 to 4 feet, first-class, 35c each, \$4 dozen.

Two years, 4 to 5 feet, medium, 50c each, \$5 dozen.

Two years, 5 to 6 feet, first-class, 60c each, \$6 dozen.

Three years, XXX, 75c each.

Dyehouse—I have fruited this variety several seasons, and regard it as much superior to the Early Richmond, being earlier, larger, & better quality.

Early Richmond—Well known, productive, a valuable cherry; mid-season.

Montmorency (ordinarie)—Large, light red, excellent quality and ripens ten days later than the Early Richmond.

English Morello—Large, late, black, fine for canning.

Wragg—First brought to notice in this county. The original trees have a record of twenty years without a failure to produce fruit. Closely resembles English Morello, yet distinct. Very valuable.

Baldwin (new)—Tree vigorous, hardy and productive. Fruit large, dark red, rich in quality; claimed to be the earliest and most valuable cherry of the Morello class.

Prices: First-class one year trees or medium size, two year, 50c each, \$5.00 per dozen.

Quinces

Orange, 4 to 5 feet, 30c each, \$3 per dozen.

Meeches, 3 to 4 feet, 30c each, \$3 per dozen.

MULBERRIES

New American—Fruit large, often one and one-half to two inches in length, juicy, rich and sweet. Tree of vigorous, upright growth, bears early. 5 to 6 feet 40c each, \$4 per dozen.

Russian Mulberry—(Seedling) 18 to 24 inches 50c per dozen, \$2 per 100; 12 to 18 inches \$1 per 100.

STRAWBERRIES

Every family should be supplied with an abundance of this early and healthful fruit. The following list comprises the best varieties, from early to late. Those marked "P" have imperfect blossoms, and should be planted near one of the Staminate varieties to insure heavy yields. Give thorough cultivation and mulch lightly at approach of freezing weather.

	DOZ.	100	1000
Warfield —(P) early, dark red, fine for market	25c	\$1.00	\$5.00
Lovett —Large, early, productive, desirable for fertilizing pistillate varieties	25c	1.00	5.00
Clyde —Very large, early, productive, plant vigorous, hardy, healthy; one of the best general purpose berries in cul- tivation	25c	1.00	5.00
Nic Ohmer (new)—Largest size, perfect blossom, excellent quality, very productive.....	25c	1.00	5.00
Sample —(P) Large, firm, ripens late and holds up in size until the last picking; should be in every garden	25c	1.00	5.00
Rough Rider —Large, bright red, firm, ripens late; succeeds best on rich, heavy soil.....	25c	1.00	
Bush Cluster —Early, very productive, producing fruit on large, strong stems that hold it off the ground; a fine berry for home use	35c	1.50	

August Luther —Extra early, hardy and vigorous: resembles Haverland, but has a perfect blossom	35c	1 50
Senator Dunlap —A valuable new variety from Illinois; resembles the Warfield in size, color and firmness, but is of much better flavor and has a perfect blossom; will be a winner.....	35c	1 50
Marie (P) new —One of the largest yet introduced; round, dark crimson in color, quality first-class, and holds up size until the last picking.....	50c	2 00
Klondike —Said to be the most remarkable berry now grown; fruit large size and highest quality; its season is very long; where grown under hill culture it produces four or five crops of berries in one season.....	50c	2 00
Sunshine (new) —Plant vigorous, fruit large and of fine flavor; resembles the old Gandy, but is much more productive; the best late variety.....	50c	2 00

RASPBERRIES

	DOZ.	100	1000
Loudon —Originated in Wisconsin; perfectly hardy, fruit large, bright red, and of excellent quality.....	50c	3 00	
Miller —Large, early, bright red; one of the best red berries	10c	50	3 00
Kansas —Early, very large, vigorous; hardy and productive. Berry firm, excellent shipper. I received an award at the World's Fair on an exhibit of Kansas raspberries..	50c	3 00	20 00
Older —A new Black Cap originated in Northern Iowa. Very large, early and productive. Prof. Budd says: "It is the best of the Black Cap for dessert use or canning" 50c		3 00	20 00
Eureka —Tested for 15 years. Claims: 1st, large as Gregg; 2nd, early as Palmer; 3d, better, quality than either; 4th, will produce as much as Gregg and Palmer together	50c		3 00
Mills —A seedling of Gregg but superior to that variety in hardiness, quality and yield. A leading grower says: "The Mills Raspberry the past season has been a growing success on my grounds. I picked from a hill of four canes $7\frac{1}{2}$ quarts. Think of that, at the rate of 18,000 quarts to the acre!" Believing this to be the best late Raspberry yet introduced, I have grown a fine stock of plants and offer them within reach of all	50c	3 00	20 00
	Each	Doz.	100

Cumberland (new) —The largest and finest Black Cap introduced; vigorous, hardy and productive, rich, juicy, excellent.....	10c	1 00	5 00
Cardinal —A new purple cap berry of the largest size and greatest excellence. See special circular for full description.....	15c	1 50	10 00

BLACKBERRIES

	DOZ.	100	1000
Snyder —Hardy, reliable, the best for general planting....	50c	2 00	
Ancient Britton —Vigorous, hardy, productive, excellent	75c	3 00	
Mersereau —A new blackberry, of the largest size, superior quality, and perfectly hardy in cane	\$1 50	10 00	

GOOSEBERRIES

	Each	Doz.
Houghton —Pale red, medium, very productive, 2 years..	15c	\$1 50

Downing —Pale green, medium to large, strong grower, productive and popular, 1 year.....	10c	1 00
2 years.....	15c	1 50
Champion —An American variety, medium to large, pale yellow, bush very vigorous and productive, 2 year.....	15c	1 50
Josselyn (Red Jacket)—Large, dark red, vigorous, very productive and of excellent quality; 1 year.....	20c	2 00
2 year.....	30c	3 00
Pearl —New, large, pale yellow, fine quality; plant vigorous, healthy and unsurpassed in yield; 2 years	20c	2 00

CURRANTS

Cherry —2 years, No. 1	10c	1 00
La Versailles —2 years, No. 1.....	10c	1 00
Victoria —2 years, No 1.....	10c	1 00
White Grape —2 years. No. 1.....	10c	1 00
Fay's Prolific —2 years, No. 1.....	15c	1 50
Pomona —New, red, sweeter than most varieties, bears regularly enormous crops: 1 year, No 1 plants	15c	1 50
2 years, No. 1 plants.....	25c	2 50
White Transparent (new)—Finest white, very large, productive, mild; 2 years, strong.....	15c	1 50

GRAPES

	Each	Doz.	100
Concord —Late, black, reliable, 1 year.....	10c	\$1 00	\$5 00
Concord —Late, black, reliable, 2 years.....	15c	1 50	7 00
